MyFAST wastewater treatment systems

MacroFITT wastewater treatment systems

The BioMicrobics MyFAST® and MacroFITT® systems use the robust FAST® process to treat wastewater from small communities and municipalities. The systems merge the needs of a larger scale treatment plant with the BioMicrobics approach to decentralized wastewater applications. Operational simplicity, reliable performance, and long working life make MyFAST® and MacroFITT® the top choice for communities looking to upgrade their wastewater systems.

MyFAST® and MacroFITT® form a complete treatment system by combining the submerged, attached growth FAST® process with innovative BioMicrobics

components - SaniTEE® screening devices and LIXOR® aerators. The submerged treatment modules fit together with interlocking hardware to form one large biological system.

Advantages of the system:

- **No full time operator needed**
- **All submerged components are permanent**
- **No moving parts under water**
- **Achieves secondary effluent standards and nutrient reduction**

MyFAST® and MacroFITT® can be configured with additional unit processes such as the NitrifAST®, ABC®-N, and ABC®-P to achieve Total Nitrogen and Total Phosphorus reduction. The treatment applications include domestic, commercial, and even some industrial wastewater sources.

HOW IT WORKS!

- 1 Settling/AMS Zone:** The first tank compartment can be used as a primary clarifier or as a roughing aerobic treatment stage when using the optional Aeration Management System (AMS).
- 2 Screening:** Wastewater passes from the primary compartment to the treatment zone through SaniTEE® effluent screens. The optional MyTEE® provides coarse screens upstream of the primary tank for trash and grit removal.
- 3 MyFAST®/MacroFITT® modules:** Wastewater is treated by the attached growth modules in the treatment zone. Oxygen is delivered to the modules by above-grade blowers.
- 4 Biosolids collection/BMS Zone:** Settled biosolids in the treatment zone are transferred to either the primary tank or to the optional sludge digester when using the optional Biosolids Management System (BMS).
- 5 Discharge:** Treated water leaves the system by gravity.

Electrical Options: Electrical components are available to meet all worldwide electrical specifications (volt/phase/frequency).

Established in 1996 to focus on water, BioMicrobics – and subsidiaries SeptiTech and Scienco/FAST – is at the forefront of sustainable design, with more than 80,000 systems in over 80 countries. Our systems meet the highest performance standards for treatment of water,

graywater, wastewater, and stormwater. BioMicrobics produces innovative systems dealing with wastewater treatment in decentralized settings. Our products are engineered to be simple, low-cost, and robust.

RetroFAST[®] wastewater treatment systems

Ideal for upgrading existing septic tanks or renovating a drain field. For more information, see our “S.O.S. – Save Our Septic[®]” warranty program.

MicroFAST[®] wastewater treatment systems

Versatile and robust, these systems are designed for individual homes, clustered homes, subdivisions, and other domestic-strength applications.

NitriFAST[®] wastewater treatment systems

For use as a second-stage treatment in series after a MicroFAST[®] system to provide additional nitrification, achieving even higher levels of nitrogen reduction than the MicroFAST[®] alone.

HighStrengthFAST[®] wastewater treatment systems

Meets the challenges of high-strength wastewater, providing treatment for higher BOD and TSS concentrations and higher influent FOG (grease) levels to achieve high quality effluent.

MyFAST[®] wastewater treatment systems

Ideal for small communities or larger commercial properties, this system maintains consistently high performance with minimal maintenance.
